

Liposomal formulations

In this section some of the results obtained using liposomes with different active principles through various ways of administration are presented.

As it may be appreciated in all the figures above the active principles used modify clearly its behaviour by liposome encapsulation.

Fig. 1: Topical route-local anesthetic.

Fig. 2: Subcutaneous route-local anesthetic.

Fig. 3: Intraperitoneal route-antiinflammatory.

Fig. 4: Oral route-antiinflammatory.

Fig. 5: Intravenous route-antiparasitic.

Fig. 6: Levels in serum and brain-antimaniac.
